## ADVANCED COST CALCULATION

# PRICE-FINDING AND BREAK-EVEN ANALYSIS

## IN LESS THAN A MINUTE

### What is in the new feature? PTV Map&Guide internet helps you reduce the complexity of your planning while giving you total control over your costs. Do you need to calculate proposals accurately based on a defined target margin? What about identifying profitable deals and avoid losses? Do you also face challenges with calculating concrete personnel costs based on regional minimum wage laws? With PTV Map&Guide internet, we empower your business so you can accomplish more.

## Why is this feature important?

Stagnant sale prices, rising costs and small margins lead to a much harder competition in the daily business. More and more companies face insolvency and bankruptcy. It is essential for you to know which deals are profitable and which are not. To survive against the competition, accurate calculations must be performed before trips are executed to see where you win or lose money.

For whom is this feature designed? It is designed for sales representatives, customer service managers, transport managers and operational planners in small, medium and large enterprises.

### What is our solution?

With PTV Map&Guide internet. you can do a full cost calculation in less than a minute. Taking into account vehicle costs, toll costs and driver costs, the tool allows you to calculate your transport costs more accurately than ever. Additionally, minimum wage regulations are also considered depending on the kind of transport, (pickup/delivery or cabotage). Save time as hours of work are now done in minutes. Benchmarks of different planning scenarios are also easily done to improve the decision-making in the daily transport business.

#### Features at a glance:

- Salary cost profiles
- Vehicle cost profiles
- Additional minimal wage costs
  Price finding
- Break-even analysis

## Key benefits:

- Shorten proposal phase and improve your customer service management.
- Reduce commercial efforts by making more proposals in less time and better quality.
   Avoid miscalculations and
- reduce financial risks and unexpected losses.
- Know your limits and ensure profitable proposals and focus on profitable orders.
- Handle executional changes so you can directly see the monetary results.
- Implement re-calculation even after binding proposal period expires.
- Implement post-calculations after a route was planned or executed.
- From now on you don't have to use many different tools to make your calculations and quotations.

#### **Cost Administration**

- Define individual vehicle costs per distance, time, trip and calendar day.
- Exclude toll costs in your calculation to compare internal vehicle costs with fixed prices of your subcontractors easily.
- Add individual costs per stop and order (e.g. no-parking zone, material usage, external supplier, tank cleaning).

#### Price Finding

- A target selling price can be calculated based on the total costs of the planned route.
- Get a price proposal by just entering the desired profit.

#### Break-Even Analysis

 One-click comparison of confirmed selling prices with costs to see if a transport route is profitable or not.
